Dé IT-opleider

Microsoft Power BI Data Analyst (PL-300) Zelfstudiepakket

In dit zelfstudiepakket zit het officiële cursusmateriaal, een labomgeving, MeasureUp-oefenexamen en een Microsoft-examenvoucher. Je hebt 180 dagen toegang tot de labomgeving.

Algemene omschrijving

In dit zelfstudiepakket zit het officiële cursusmateriaal, een labomgeving, MeasureUp-oefenexamen en een Microsoft-examenvoucher. Je hebt 180 dagen toegang tot de labomgeving.

This course will discuss the various methods and best practices that are in line with business and technical requirements for modeling, visualizing, and analyzing data with Power BI. The course will also show how to access and process data from a range of data sources including both relational and non-relational data. This course will also explore how to implement proper security standards and policies across the Power BI spectrum including datasets and groups. The course will also discuss how to manage and deploy reports and dashboards for sharing and content distribution. Finally, this course will show how to build paginated reports within the Power BI service and publish them to a workspace for inclusion within Power BI.

Doelgroep

The audience for this course are data professionals and business intelligence professionals who want to learn how to accurately perform data analysis using Power BI. This course is also targeted toward those individuals who develop reports that visualize data from the data platform technologies that exist on both in the cloud and on-premises.

Leerdoelen

- Ingest, clean, and transform data.
- Model data for performance and scalability.
- Design and create reports for data analysis.
- Apply and perform advanced report analytics.
- Manage and share report assets.
- Create paginated reports in Power BI.

Voorkennis

Om deze training zo goed mogelijk te kunnen volgen en een succesvolle data-analist te worden, is het van belang dat je enige ervaring hebt met het werken met data die opgeslagen is in cloudomgevingen.

Wij adviseren om eerst de training [Microsoft Azure Data Fundamentals \(DP-900\)](#) te volgen, aangezien deze training jou een sterk uitgangspunt biedt.

Onderwerpen

Module 1: Get Started with Microsoft Data Analytics

This module explores the different roles in the data space, outlines the important roles and responsibilities of a Data Analysts, and then explores the landscape of the Power BI portfolio.

Lessons:

- Data Analytics and Microsoft.
- Getting Started with Power BI.

Lab: Getting Started in Power BI Desktop

- Getting Started.

After completing this module, students will be able to:

- Explore the different roles in data.
- Identify the tasks that are performed by a data analyst.
- Describe the Power BI landscape of products and services.
- Use the Power BI service.

Module 2: Prepare Data in Power BI

This module explores identifying and retrieving data from various data sources. You will also learn the options for connectivity and data storage and understand the difference and performance implications of connecting directly to data vs. importing it.

Lessons:

- Get data from various data sources.

Lab: Preparing Data in Power BI Desktop

- Prepare Data.

After completing this module, students will be able to:

- Identify and retrieve data from different data sources.
- Understand the connection methods and their performance implications.
- Use Microsoft Dataverse.
- Connect to a data flow.

Module 3: Clean, Transform, and Load Data in Power BI

This module teaches you the process of profiling and understanding the condition of the data. They will learn how to identify anomalies, look at the size and shape of their data, and perform the proper data cleaning and transforming steps to prepare the data for loading into the model.

Lessons:

- Data shaping.
- Enhance the data structure.
- Data Profiling.

Lab: Transforming and Loading Data in Power BI Desktop

- Loading Data.

After completing this module, students will be able to:

- Apply data shape transformations.
- Enhance the structure of the data.
- Profile and examine the data.

Module 4: Design a Data Model in Power BI

This module teaches the fundamental concepts of designing and developing a data model for proper performance and scalability. This module will also help you understand and tackle many of the common data modeling issues, including relationships, security, and performance.

Lessons:

- Introduction to data modeling.
- Working with tables.
- Dimensions and Hierarchies.

Lab: Data Modeling in Power BI Desktop

- Create Model Relationships.
- Configure Tables.
- Review the model interface.
- Create Quick Measures.

Lab: Advanced Data Modeling in Power BI Desktop

- Configure many-to-many relationships.
- Enforce row-level security.

After completing this module, students will be able to:

- Understand the basics of data modeling.
- Define relationships and their cardinality.
- Implement Dimensions and Hierarchies.
- Create histograms and rankings.

Module 5: Create Model Calculations using DAX in Power BI

This module introduces you to the world of DAX and its true power for enhancing a model. You will learn about aggregations and the concepts of Measures, calculated columns and tables, and Time Intelligence functions to solve calculation and data analysis problems.

Lessons:

- Introduction to DAX.
- DAX context.
- Advanced DAX.

Lab: Advanced DAX in Power BI Desktop

- Use the CALCULATE() function to manipulate filter context.
- Use Time Intelligence functions.

Lab: Introduction to DAX in Power BI Desktop

- Create calculated tables.
- Create calculated columns.
- Create measures.

After completing this module, students will be able to:

- Understand DAX.
- Use DAX for simple formulas and expressions.
- Create calculated tables and measures.
- Build simple measures.
- Work with Time Intelligence and Key Performance Indicators.

Module 6: Optimize Model Performance in Power BI

In this module you are introduced to steps, processes, concepts, and data modeling best practices necessary to optimize a data model for enterprise-level performance.

Lessons:

- Optimize the model for performance.
- Optimize DirectQuery Models.
- Create and manage Aggregations.

After completing this module, students will be able to:

- Understand the importance of variables.
- Enhance the data model.
- Optimize the storage model.
- Implement aggregations.

Module 7: Create Reports in Power BI

This module introduces you to the fundamental concepts and principles of designing and building a report, including selecting the correct visuals, designing a page layout, and applying basic but critical functionality. The important topic of designing for accessibility is also covered.

Lessons:

- Design a report.
- Enhance the report.

Lab: Designing a report in Power BI Desktop

- Create a live connection in Power BI Desktop.
- Design a report.
- Configure visual fields and format properties.

Lab: Enhancing reports with interaction and formatting in Power BI Desktop

- Create and configure Sync Slicers.
- Create a drillthrough page.
- Apply conditional formatting.
- Create and use Bookmarks.

After completing this module, students will be able to:

- Design a report page layout.
- Select and add effective visualizations.
- Add basic report functionality.
- Add report navigation and interactions.
- Improve report performance.
- Design for accessibility.

Module 8: Create Dashboards in Power BI

In this module you will learn how to tell a compelling story through the use of dashboards and the different navigation tools available to provide navigation. You will be introduced to features and functionality and how to enhance dashboards for usability and insights.

Lessons:

- Create a Dashboard.
- Real-time Dashboards.
- Enhance a Dashboard.

Lab: Creating a Dashboard in Power BI Service

- Create a Dashboard.
- Pin visuals to a Dashboard.
- Configure a Dashboard tile alert.
- Use Q&A to create a dashboard tile.

After completing this module, students will be able to:

- Create a Dashboard.
- Understand real-time Dashboards.
- Enhance Dashboard usability.

Module 9: Enhance reports for usability and storytelling in Power BI

This module will teach you about paginated reports, including what they are how they fit into Power

BI. You will then learn how to build and publish a report.

Lessons:

- Paginated report overview.
- Create Paginated reports.

Lab: Creating a Paginated report in Power BI Desktop

- Use Power BI Report Builder.
- Design a multi-page report layout.
- Define a data source.
- Define a dataset.
- Create a report parameter.
- Export a report to PDF.

After completing this module, students will be able to:

- Explain paginated reports.
- Create a paginated report.
- Create and configure a data source and dataset.
- Work with charts and tables.
- Publish a report.

Module 10: Perform Advanced Analytics in Power BI

This module helps you apply additional features to enhance the report for analytical insights in the data, equipping you with the steps to use the report for actual data analysis. You will also perform advanced analytics using AI visuals on the report for even deeper and meaningful data insights.

Lessons:

- Advanced Analytics.
- Data Insights through AI visuals.

Lab: Data Analysis in Power BI Desktop

- Create animated scatter charts.
- Use the visual to forecast values.
- Work with Decomposition Tree visual.
- Work with the Key Influencers visual.

After completing this module, students will be able to:

- Explore statistical summary.
- Use the Analyze feature.
- Identify outliers in data.
- Conduct time-series analysis.
- Use the AI visuals.
- Use the Advanced Analytics custom visual.

Module 11: Manage Datasets in Power BI

In this module you will learn the concepts of managing Power BI assets, including datasets and workspaces. You will also publish datasets to the Power BI service, then refresh and secure them.

Lessons:

- Parameters.
- Datasets.
- Security in Power BI.

After completing this module, students will be able to:

- Create and work with parameters.
- Manage datasets.
- Configure dataset refresh.
- Troubleshoot gateway connectivity.
- Understand the aspects of Power BI security.
- Configure row-level security roles and group memberships.

Module 12: Create and Manage Workspaces in Power BI

This module will introduce you to Workspaces, including how to create and manage them. You will also learn how to share content, including reports and dashboards, and then learn how to distribute an App.

Lessons:

- Creating Workspaces.
- Sharing and Managing Assets.

Lab: Publishing and Sharing Power BI Content

- Map security principals to dataset roles.
- Share a dashboard.
- Publish an App.

After completing this module, students will be able to:

- Create and manage a workspace.
- Understand workspace collaboration.
- Monitor workspace usage and performance.
- Distribute an App.
